SUMMARY

Data analyst and MSc (Tech) candidate in Data Analytics at the University of Turku (81 of 120 ECTS completed, Dean's Honour List 2025 to 2026), with close to two years of professional experience building data pipelines, warehousing and event instrumentation as a contract analyst for organisations in the UK and Bangladesh. Graduate coursework in machine learning evaluation, deep learning, computer vision and statistical analysis, alongside a minor in health technology. Authored and presented a peer reviewed IEEE conference paper benchmarking machine-learning methods against a shared dataset; master's thesis in progress on a pipeline for generating realistic synthetic image datasets. Comfortable owning the middle of the data stack and reporting results honestly, including to non specialist readers. Based in Turku on a Finnish residence and work permit. Available part time alongside studies now, and full time from mid 2027.

EDUCATION

MSc (Tech), Information and Communication Technology, Data Analytics University of Turku, Finland. August 2025 to expected 2027.

- Named to the **Dean's Honour List** for the 2025 to 2026 academic year. Thesis in progress: realistic synthetic image dataset generation.
- 81 of 120 ECTS completed. Relevant coursework: Evaluation of Machine Learning Methods, Machine Learning and Pattern Recognition, Deep Learning, Deep Learning in Human Language Technology, Computer Vision and Sensor Fusion, Statistical Data Analysis, Data Analysis and Knowledge Discovery, and Algorithm Design.
- Interdisciplinary studies: Health Technology and Wearables minor, covering a Machine Learning Health Technology Project and Analytics for Health Wearables, plus Lean Digital Business Design and Knowledge and Innovation Management.

BSc, Computer Science and Engineering BRAC University, Dhaka, Bangladesh. 2019 to 2022. CGPA 3.6 out of 4.0.

EXPERIENCE

Data Analyst Bismo Technologies Ltd., Dhaka. Contract, October 2024 to June 2025.

- Built data pipelines and warehousing for newly introduced internal systems.
- Ran both self-hosted and cloud analytics stacks for privacy-sensitive datasets.
- Designed analytics and marketing technology instrumentation for newly onboarded clients.
- Contributed the analytics layer to a cross-team mobile product build.

Data Analyst Marketingo Bangladesh, Dhaka. Contract, May 2024 to May 2025.

- Analysed large survey datasets in IBM SPSS for a multi-partner research programme.
- Applied data-driven research methods and turned statistical output into written findings and recommendations for non-technical stakeholders.

Data Analytics and MarTech Strategist Growth and Analytics, London. Remote, September 2023 to April 2024.

- Built measurement plans for international clients: custom event schemas, event properties, and tag implementation in JavaScript and HTML.
- Delivered product, cohort and marketing analyses using GA4, Twilio Segment, PostHog, Mixpanel and Customer.io.
- Researched and selected analytics tooling against client requirements, documenting the trade offs behind each choice.

PROJECTS

Antibiotic Efficacy Indicator (AEI) JunctionX Turku 2026, Tyks Laboratories challenge.

- Ward level antimicrobial resistance reporting tool (Python, DuckDB, FastAPI, React) that publishes every rate with its denominator, Wilson confidence interval and suppression reason, rather than hiding small sample cells.
- Validated the statistics against an independently written pipeline of 99 tests, including 48 golden value and 29 parity checks, which caught two real defects. Alert text is derived from the statistics, not generated by a language model.

PuckLights Ice hockey highlight generation.

- Real time computer vision pipeline that detects goals and saves in live or recorded ice-hockey footage and assembles them into highlight reels through a cross platform Flutter app. Lead contributor in a team of five, responsible for the systems work: running inference fast enough for live play on a single RTX GPU and parallelising it across concurrent streams and users, on top of adapted open source detection models.

RESEARCH AND PUBLICATION

"Comparative Analysis of Machine Learning Techniques in Optimal Site Selection" International Conference on Computer and Information Technology (ICCIT), IEEE, December 2023. DOI 10.1109/ICCIT60459.2023.10441367

- Benchmarked several supervised learning models against a shared dataset and a common set of evaluation criteria, then wrote up the comparison for peer review.
- Presented the paper and defended the methodology to an international academic audience in Cox's Bazar, Bangladesh.

SKILLS

- **Machine learning:** supervised learning, deep learning, computer vision and object detection, NLP, model evaluation and benchmarking, real time inference, MLOps
- **Data and analysis:** Python (pandas, NumPy, scikit-learn), SQL and PostgreSQL, DuckDB, data modelling, pipelines and warehousing, IBM SPSS, statistical analysis and hypothesis testing, Power BI, Excel
- **Analytics tooling:** GA4, Twilio Segment, PostHog, Mixpanel, Customer.io, Google Tag Manager, event tracking and schema design
- **Engineering:** JavaScript, Node.js, FastAPI, React, MongoDB, Git
- **Research and writing:** peer reviewed publication, academic and technical writing, reporting statistical findings to non specialist readers
- **Languages:** Bengali (native), English (C1 to C2), Finnish (beginner, in study)
- **Certifications:** Machine Learning Specialization from Stanford University and DeepLearning.AI (2024), Katonic MLOps (2023), Google Advanced Analytics
